

WILLITON LOOP EXTENSION

Thank you for all your donations.

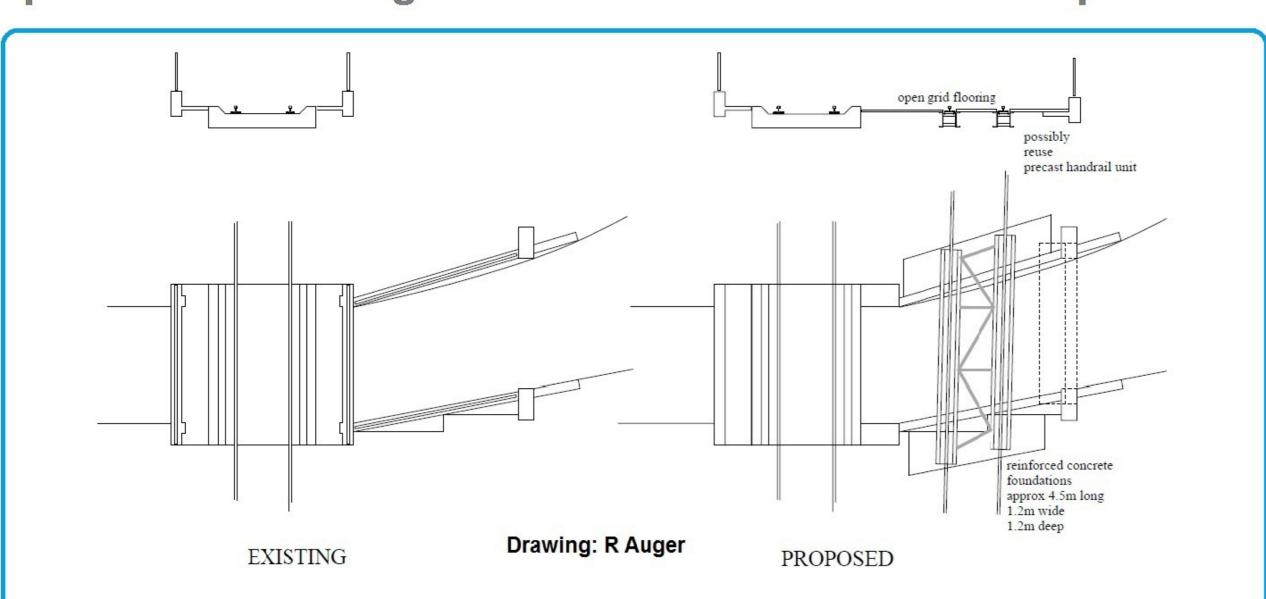

We are now in a position to extend the loop at Williton, returning the south alignment to its original layout and offering many operational benefits.

Repositioning points 12B away from the station will improve the alignment and enable the platform to be extended.

A future phase of the scheme could look at repositioning points 14B allowing a similar extension to the down platform.

The new bridge will not restrict stream flow and will allow future flood water to filter back into the stream.

Moving point 16 back towards Stogumber will provide better track alignment, make space for a trap point and enable trains to arrive from opposite directions at the same time.
